

ONEPM RCA

Enterprise Level Defect Elimination and RCA

Enterprise level, scalable solution, to manage defect elimination and RCA programs.

One system to manage the process of defect/problem prioritization and analysis triggers. Conduct analysis with a scalable depth of analysis based on severity of the problem, develop effective solutions, track progress and implement outcomes, leverage effective solutions across entire organizations where applicable.

About OnePM®

OnePM is a centralized, connected, Asset Strategy Management system that enables you to efficiently develop, deploy and sustain effective strategies to all assets. OnePM utilizes real data to set up benchmarks, monitor KPIs, drive improvement and rapidly deploy the best strategies, enterprise-wide.

One Enterprise – One System

Avoid value loss that is typical when multiple systems and RCA methodologies are used by different groups. Using one system to capture and manage all analysis, learnings, solutions and implementation provides a foundation for organisation IP development and the leverage of excellence across all sites and departments.

Scalable Analysis

Support all levels of analysis from the simplified 5 why style analysis through to more complex quantified analysis within one environment. Apply the right level of analysis to defects and problems based on custom triggers.

Systemic Problem Analysis

Using bulk data views and causal categories determine key system issues to resolve. The OnePM Defect Elimination environment provides flexible bulk data analysis and reporting capability.

Connected to Reliability Strategy

OnePM Defect Elimination and RCA can be connected to the OnePM Reliability Strategy environment to further enhance asset performance improvement.

Connected to EAM Systems

Get the benefit of a seamless connection between defect elimination action and solution tracking with EAM systems, where work requests are required. Extract and analyze relevant EAM data where required to support analysis.

Prioritize Analysis and Determine Effort

All defects/problems can be recorded and using custom frameworks they can be prioritized for analysis based on business benefit and value. Appropriate level of effort can also be determined based on severity and problem types. OnePM Defect Elimination and RCA ensures focused effort with high ROI.
